

CEVAMUNE® is a soluble scored tablet that combines both the roles of chlorine neutraliser and colouring agent. This routine vaccine administration improvement product is vital for performing proper vaccination via drinking water.

PROTECTS LIVE VACCINES

- CEVAMUNE®: protects live vaccines against inactivation by chlorine and is effective against high levels of chlorine.
- has no adverse effect on the vaccine titre.
- has a buffer effect on the pH.

GIVES CONTROL OVER DISTRIBUTION OF VACCINE SOLUTION

- Through its dye, CEVAMUNE® allows distribution of the vaccine solution to be checked.

ENABLE EVALUATION OF VACCINE UPTAKE

- CEVAMUNE® enables vaccine uptake to be evaluated inasmuch as it colours the tongue and crop of vaccinated birds, blue.
- Vaccination is considered to have been correctly performed if at least 90 % of the birds inspected have blue colouring 2 hours after the start of administration.

SIMPLE AND SAFE

- 1 tablet per 100 litres of water.
- Soluble scored tablet.
- Packaged in leak-tight individual sachets.
- CEVAMUNE® can also be used when vaccinating with dosing pumps.
- CEVAMUNE® is free of bovine-derived substances.
